

U.S. Epitaph Of The Stupids, America's Tombstone

by joe martin

Americans are microwaving, sonaring, & radaring each other out of existence.

I read recently that the U.S. government was to hire one in twenty four citizens in the U.S. to spy on U.S. citizens as part of the Terrorism Information Prevention System, aka "TIPS", which is more domestic spies per capita than the East German Stasi Spy Network had, so there is for sure a determination to whip Americans into conformity with this threat which comes straight from the Bush-Cheney Regime, a Regime which has already proven its willingness to commit grandiose fraud to start a phony war. (1.)

If the nature of the TIPS agent reporting on we citizens is not much more truthful than the regime's role model of leadership, America certainly cannot hope to survive. Why would false reporting be tolerated by any citizen or group of citizens in the U.S.?

In fact, the domestic spying is done with small radar, sonar and/or microwave devices which have the ability to listen through walls, etc., but also which project a radiation field onto the target-victims, and we know from research there are myriads of scientific studies which define the ill effects of such radiation which foreigners, especially Russians, call "microwave sickness", or "microwave poisoning". However, we hear little to nothing on this subject from the American so-called mainstream media, and next to nothing from U.S. doctors and lawyers and lawmakers, so the American public is being rather blindsided, still, by this process of domestic spying by radiation producing devices, leaving the suffering and cancer to go on and on.

More eye problems, heart problems, internal health problems for more and more doctors to get rich on by treating more and more "new" conditions and ailments; more and more litigation against drug companies, etc., for lawyers to get rich on by filing lawsuits on behalf of stricken clients, more freshly printed Federal Reserve Notes to fund grant programs for phony vaccines.

Other spying may be done from greater distances from "government" cars and vehicles with even more powerful weapons and along with the regular field of electromagnetic energy other frequencies called "carrier waves" can be added to the radiation for an evermore putrid radiation mixture against the target-victim(s). In fact, it may be possible to add x-ray-gamma ray radiation to the blend, for a simultaneous "tech shot".

But the point is the same. The right to trial by jury and the right to "face one's accusers" is removed and the unfortunate target-victim has been robbed not only of his or her rights, but robbed of health and maybe even life itself. We learn from Michael Sweeny's excellent, "The Professional Paranoid", that if several of these fields (of electromagnetic energy) are directed at the target victim the resulting field strength where the beams of energy intersect is exponentially greater than just one beam, and I suspect this multiple ganging up effect can be severely debilitating and detrimental to a person. I believe this is how an aneurysm can actually be deliberately inflicted on someone. I'm sure there are multitudes of other wormholes the perps can create with their seemingly limitless imagination for doing evil with electronics.

If any given person is already receiving a basic residual frequency of microwave from at least one cell tower, and uses a cell phone periodically, then perhaps receives more microwave from nearby microwave ovens or others' cell phones, and maybe a little emf from a computer and monitor as well, one is already receiving many different doses of what you might call residual levels of electromagnetism. If such person is also in the region where broadband is present there is even more radiation saturation in addition to the weather radar which has become increasingly powerful in many areas of the U.S. each year, and to top all that off try adding the radar from the regular traffic lights and signals and maybe a combination of all the radiation above added to the police officer speed trap radar, and already there may accidentally be a great deal more than a safe level of emf (electromagnetic frequency) exposure to one's body.

The problem with all this is the added surveillance radiation which is sometimes greater than just nominal levels of emf, and you naturally have a formula for health disaster, in my opinion.

If we add to all the above mentioned radiation the super high gigahertz satellite radiation and the possibility of receiving multiples of several of all these electromagnetic sources at or near the same time, I actually think fairly healthy human bodies can and do suffer heart attacks and strokes, especially while these frequencies are present, and especially when the infamous H.A.A.R.P. site is blasting some of its mega-wattage microwave into the atmosphere and into the ionosphere. All this does not include the "Woodpecker" systems which have broadcasted at the U.S. from across the globe from foreign countries. While radio frequencies and low level radar may be up to a few gigahertz, some of the satellite radiation was already above the ninety plus gigahertz range years ago and who knows how high it is with the latest satellites.

So if you and friends or family decide to escape urban electromagnetic pollution and head for the sticks to go camping away from the power lines there are more and more cell towers under construction, thanks to folks like Senator John McCain of Arizona, who tabled a bill from a petition introduced by Cathy Bergman, president and founder of EMR Alliance, an international activist organization. The bill addressed the safety issues of RF (radio frequency) exposures from cellular technology and McCain effectively prevented the public testimony even though others petitioned also. (2.) When it comes to obstructions against big money getting its way, my opinion is: The current criminal G.O.P., which is staging a phony war in IraqNam, will go for the money, the public safety and health be damned.

It would be bad and unjust enough if someone had been branded a criminal after a fair trial and radiation applied to the prisoner to execute him or her as a sentence, but to be radiated to death with the slow "torture-murder" which the unlawful domestic spying causes after having a finger of accusation pointed at a citizen is simply un-American!! No hearing, no trial, no witnesses to speak for the defendant, just the surveillance spy radiation applied on the pretext of doing an "investigation" on the crime "suspect". All this done to responsible, knowledgeable American Citizens while Congress turns a blind eye to the felony crimes of the illegal immigrants who cross over the Mexican-South U.S. borders. Some of these aliens have even committed murder and many felony assaults and rapes, but it is the citizens already here in America who are singled out for destruction, demolition, and extinction to make way for a bunch of foreigners, some of whom cannot even speak English! Some law enforcement!

If ever there was a stupids contest it has reached total epic proportion in the U.S., a land previously known for democracy, fairness, justice, and all that, and this STUPIDS CONTEST has been forced upon the American People against our will. The outcome can hardly be looked forward to; it can only be dreaded.

Surely the tombstone from the oncoming aftermath will read;

"Americans: Destroyed By Their Contest Of The Stupids!"
